## Collecting blood products prior to transfusion

A common cause of transfusion reactions is the transfusion of an incorrect unit of blood that was intended for a different patient. This is often due to mistakes when collecting blood from the blood bank.

### COLLECTING BLOOD PRODUCTS FROM THE BLOOD BANK

- 1 Bring written documentation to identify the patient.
- 2 Check that the following details on the compatibility label attached to the blood pack exactly match the details on the patient's documentation:
  - Patient's family name and given name
  - Patient's hospital reference number
  - Patient's ward, operating room or clinic
  - Patient's ABO and RhD group.
- 3 Fill in the information required in the blood collection register.

## Storing blood products prior to transfusion

**All blood bank refrigerators should be specifically designed for blood storage.**

Once issued by the blood bank, the transfusion of whole blood, red cells and thawed fresh frozen plasma should be commenced within 30 minutes of their removal from refrigeration.

If the transfusion cannot be started within this period, they must be stored in an approved blood refrigerator at a temperature of 2°C to 6°C.

The temperature inside every refrigerator used for blood storage in wards and operating rooms should be monitored and recorded daily to ensure that the temperature remains between 2°C and 6°C.

If the ward or operating room does not have a refrigerator that is appropriate for storing blood, the blood should not be released from the blood bank until immediately before transfusion.

All unused blood products should be returned to the blood bank so that their return and reissue or safe disposal can be recorded.

# Clinical transfusion procedures

## Key points

- 1 Every hospital should have standard operating procedures for each stage of the clinical transfusion process. All staff should be trained to follow them.
- 2 Clear communication and cooperation between clinical and blood bank staff are essential in ensuring the safety of blood issued for transfusion.
- 3 The blood bank should not issue blood for transfusion unless a blood sample label and blood request form have been correctly completed. The blood request form should include the reason for transfusion so that the most suitable product can be selected for compatibility testing.
- 4 Blood products should be kept within the correct storage conditions during transportation and in the clinical area before transfusion, in order to prevent loss of function or bacterial contamination.
- 5 The transfusion of an incompatible blood component is the most common cause of acute transfusion reactions, which may be fatal. The safe administration of blood depends on:
  - s Accurate, unique identification of the patient
  - s Correct labelling of the blood sample for pre-transfusion testing
  - s A final identity check of the patient and the blood unit to ensure the administration of the right blood to the right patient.
- 6 For each unit of blood transfused, the patient should be monitored by a trained member of staff before, during and on completion of the transfusion.

Kindle Paperwhite Electronic Book Reader. An electronic book, [1] is a, - à è œ œ ' ' ' ' à é à è à è It is important to differentiate the electronic or digital book from one of the most popular devices for reading: The Electronic Book Reader or e-reader, in its English version. Although sometimes it is defined as "an electronic version of a printed book", [2] à è à è à è there are some electronic books without a printed equivalent. Electronic books can be read on dedicated electronic reading devices, but also on any computer device with a controllable display screen, including desktop computers, laptops, electronic book reader and smartphones. General some authors propose that a distinction must be made between electronic and hypertext books. The hypertext is intended for the structuring of information through the connections, while an electronic book has been defined as the digital version of a book. Although this definition welcomed the books initially modified on paper, the number of electronic books that does not have a printed edition is increasing. An example of hypertext would be Wikisource and one of the electronic book, any book in digital format that can be found on the internet or on any data storage device. We can find fluid and fixed layout books. The fluid textbooks are those that allow us to change the appearance of the text through the reader we use, we can change its size, color, spacing of the lines and margins. On the other hand, those of Maquetaciã:n fixed, somehow we see the fixed content, not to mention the interactive characteristics that this We contain, let's see a design that we cannot change. The electronic book is an information resource of the recent insertion in the universe of science, technology, education and culture. So far, e-books represent the last step performed by the publishers in the field of the digital edition: a type of personal computer with a shy high definition screen and a Meneaires system with the use of basic commands. [15] History This article or section needs references that appear in an accredited publication. This notice was inserted on November 3, 2016. There are many devices that can be used as a reader of electronic books: PC, PDA, Porthel and in general any device that has a screen and memory. However, at the end of the first day of the 21st century, devices began to appear whose function was to serve exclusively for the reading of electronic books. These devices are characterized by a design that allows you to emulate the versatility of the traditional paper book. Therefore, mobility and autonomy have been sought (Miã\*vile devices with low energy consumption to allow prolonged readings without recharging), screens with sufficient size to show traditional documents (an A4 or an A5) and a high contrast level also in the full light of the day. In this context, electronic ink appears, which has a "paper effect" (due to the absence of its lighting and its high contrast obtained) and its low consumption (since this technology does not need more food that in screen changes). Examples of these devices are Iliad (manufactured by Irex and the first device marketed in Spanish since 2006), Sony's reader (PRS-500 and PRS-505), Hanlin V3 (marketed in Spanish by grammade under the name of Papyre ), The Starbook STK-101, THE BOOKENCYBOOK, Amazon Kindle, which is a product by Amazon.com Amazon.com 2010 iPad, an Apple product that also offers a liber library as Amazon, also consequently diversify the presentation of electronic books with multimediae capacities. In the last years it has begun to incorporate into the collections of the libraries, in particular in those that are inserted in academic institutions. Despite the relatively little time that the electronic book has in the collections of digital libraries, its incorporation is generating a revolution in the transmission of knowledge and in the diffuse of culture. Among the potential that the electronic book offers, the following can be mentioned: Huge training of information storage such as the possibility of transporting it in large volumes. [14] Import events Michael Hart (left) and Gregory Newby (right) responsible for the Project Gutenberg, 2006 1949: istgela Ruiz Roble Air pressure for book reading ", precursor to the electronic book. Patented dated December 7, 1949, according to the patent No.m. 190,698. In 1962 a prototype of the mechanic encyclopedia was carried out, built in the Park of Artillerãa de Ferrol (the Corumon), being herself who directed the works. Since 2006, the encyclopedia was part of the exhibition of the Pedagic Museum of Galicia (Mupega) 4 in Santiago de Compostela (La Corumon) until May 4, 2012, which passed to the permanent exhibition of the National Museum of Science and Corumon technology. 1949-1970: Roberto Busa Piega who is probably the first electronic book, the index thomisticus, an electronic zendice with numerous annotations about the work of Tomés de Aquino, compiled by Roberto Bus, between 1949 and the day of each 1970 [3] 1971: Michael Hart is considered by ,loã±ãlaapse ne socinã\*ãrtcele Sorbil ed Adneir Aremirp al ,Moc.EVEUNITIV NAZNIO Y Atenalp Opurg :1002 à' nuply1l. oãpse ne onimac le orgalim alevon us odalrel nããããã©éã©élgni on Otarof ne telub Gnidir Us Aznal Gnik Nehpets :0002 Jadirauqerã ed y Odacirbaf Euf nã\*ãççcockNeVni al ed la ocitnã©ééöble ocinã\*ãêurcele ORPAP ED LANOICNOCNOCNOC orbil la socitcãjãf
